

TREE DESTRUCTION PLAN FOR RESIDENTIAL PRECINCTS “A” AND “B” AND THE GOLF COURSE

Please note: It is unknown how many, and what species of trees in residential precincts C, D, E and the Hub (precinct F), internal road, and major access road will be destroyed, as this information was not included in the Development Application.

694 trees are to be bulldozed from the golf course, and 181 from residential precincts A and B.

Significant landscape trees (SLTs) is a reference to trees which have a diameter at breast height of 60cm or greater. Some ‘significant’ species never attain this diameter.

- The Forest red gum Woodland / Open forest community is analogous with a Regional Ecosystem, and 2.1 hectares of the 15.27ha (14%) will be bulldozed.
 - Riparian vegetation 1.25ha of 3.05ha (37%) will be bulldozed.
 - Swamp she-oak woodland 1.42ha of 6.5ha (22%) will be bulldozed.
 - She-oak Woodland 0.23ha of 3.11ha (7%) will be bulldozed.
 - Broad leaved Paperbark Woodland / Open forest 0.29ha of 0.43ha (67%) to be bulldozed.
 - Brushbox open forest and Woodland 4.2ha of 8.3ha (49%) will be bulldozed.
 - Mixed Eucalypt Open forest and Woodland (0.73ha of 5.13ha (14%) to be bulldozed.
 - Ephemeral freshwater wetland 0.84ha of 1.1ha (76%) will be destroyed.
 - Mangroves (dominated by grey mangrove) 0.23ha of 2.98ha (7.7%) to be destroyed.
 - Mangroves (dominated by milky mangrove) 0.46ha of 0.66ha (69.69%) to be destroyed.
 - Mangroves (dominated by mangrove fern) 0.24ha of 0.31ha (77.4%) to be destroyed.
- Total area of Mangroves to be destroyed.0.93ha of 3.95ha (23.5%).
