

"Fluoride?
Harmless."

"Harmless?
Get Real !"

Many medicos and dentists don't know:

- 1 that... fluoride is a powerful poison interfering with enzyme systems, has been used as rat poison and is still in use as roach powder.
- 2 that... daily ingestion of fluoride leads to accumulation inside the body.
- 3 that... fluoride has been implicated in many serious adverse health effects.
- 4 that... dental fluorosis (mottled teeth) is a poisoning symptom from ongoing low level fluoride intake.
- 5 that... dental fluorosis weakens tooth enamel and is conducive to dental decay.
- 6 that... the Merck Manual of Medical Information misinforms on fluoride
- 7 that... in the Merck Manual of Diagnosis & Therapy is clearly stated that a fluoride deficiency has never been induced, which means it does not exist.
- 8 that... 'fluoride deficiency' as argument for water fluoridation is promoting to tip poison into our drinking water to remedy a non-existent deficiency.
- 9 that... in the last twenty years the dental research community has found that ingestion of fluoride is ineffective in protecting teeth against decay and that only topical application (fluoridated toothpaste) can be beneficial.
